FUTURA

GRAPHENE

PROJECT STARLIGHT · PHASE 1

Phase 1 Requirements Summary

A concise overview of what's being built in Phase 1, anchored to the source-of-truth documentation in Confluence.

PREPARED

June 2026

GO-LIVE TARGET

29 August 2026

BUILD OWNER

Graphene

SIGN-OFF

Futura (Frankie / Bridget / Natasha)

PROTOTYPE

mockups-deploy-gamma.vercel.app

01

LOCKED FOR PHASE 1

Foundational principles

These twelve principles shape every decision in Phase 1. They were established through the POC, three playback sessions, the 26 May closure call, and the Phase 1 Detailed Workflow Document v1.0. **Everything that follows in this document is an implementation of these principles.**

P1

Clients onboard straight away

Portal invite auto-sent when admin creates the case. Adviser does not gate or delay. If a case can't onboard immediately, the exception is captured at case-setup.

P2

Portal must work for clients who never log in

Adviser can take a case end-to-end on the client's behalf using Edit on Behalf and manual ID override. Essential for less-digital clients.

P3

System adapts to the adviser's conversation, doesn't restrict it

No prescribed order for adviser-side work. The portal supports fully online, fully offline, and mixed-mode client journeys. The adviser decides the order in which they capture notes, rationale, edits, overrides, meetings.

P4

Advisers see, admins do

Adviser portal structured around regulatory + relationship work. Admin owns operational actions (chase, classify, issue, account opening). Role profile from Futura will codify this further.

P5

Workflow is task-driven (mirrors IO)

Case movement is driven by task completion. Closing stage tasks auto-creates the next stage's tasks against the next owner.

P6

Admin has full access

Admin sees every case across all advisers and trading styles. Adviser sees their own caseload. Role profile narrows adviser, not admin.

P7

Futura primary brand, trading-style on adviser card only

Futura branding throughout. Trading-style (Whitefriars, CB Financial Advisers, Futura Wealth Management, Bulley Davey) appears only on the "Your Adviser" card.

P8

Data captured once, used everywhere, with provenance

Client enters data once; adviser sees it. Adviser captures on behalf; client doesn't re-enter. Audit trail shows who entered what when.

P9

Internal vs client-visible note flag

Every note tagged "internal" or "client-visible". Client portal only renders client-visible content. Admin sees both.

P10

Risk profiler is in-house Graphene-built

Phase 1 standardises on Graphene's own risk profiler across the Group. Question set and scoring confirmed via Futura demo/sign-off.

P11

Suitability report = templated engine

Auto-populated from portal data + editable narrative + version control + PDF output. Phase 1 capability. Tailored/bespoke SR deferred to Phase 2.

P12

Simple language and signposting throughout the client journey

Plain English replaces FS jargon ("Your Details" not "Fact Find"). Tooltips and journey signposting on every screen so the client always knows where they are, what's next, and what to have ready.

02

Client Portal

IN PHASE 1

The client-facing portal where a new Futura client completes onboarding: invite acceptance, account setup, documents, ID verification, fact find ("Your Details"), risk profile, and onboarding completion. A persistent sidebar and 7-step tracker run across every screen.

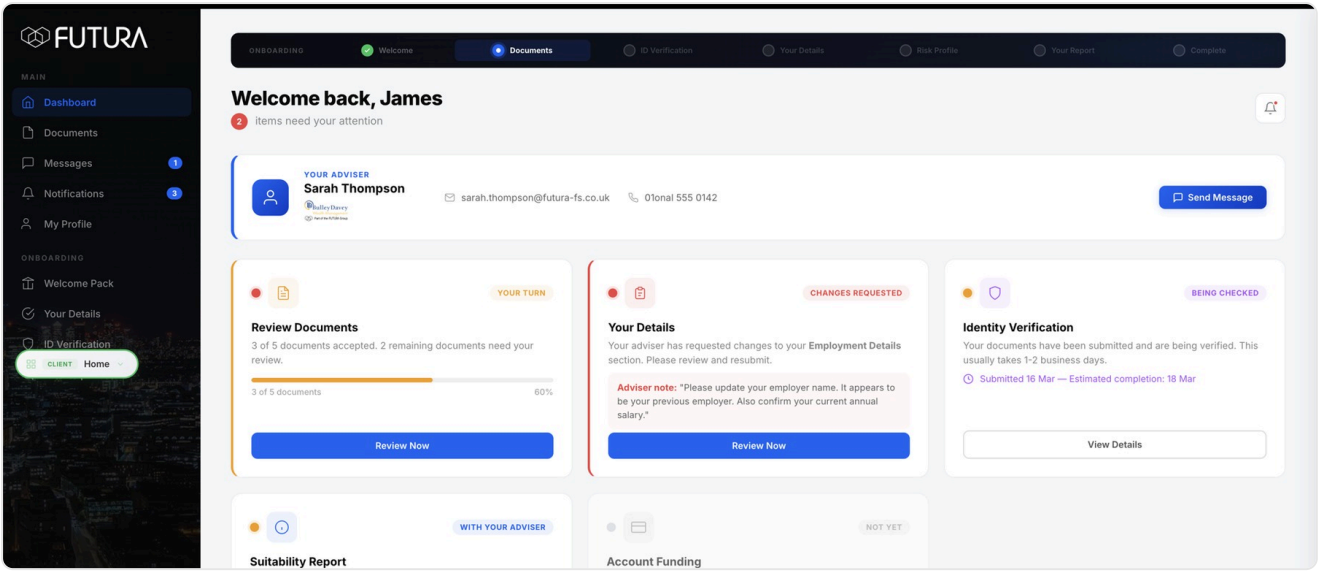

Fig 2.1 Client dashboard - 7-step tracker, sidebar, status cards, adviser intro with trading-style co-brand

Phase 1 features

Portal invite auto-sent on case creation. Futura-branded email with magic link / credentials.

Account setup with live password strength meter, Terms acceptance, eye-toggle reveal.

Welcome pack orientation: adviser intro card (only place trading-style branding appears), "What you'll need" per stage, fee schedule, FCA reference.

Documents review and sign (Engagement Letter, Privacy Notice, Key Facts, etc.). Per-document status tracking. Admin can chase outstanding.

ID verification with photo ID + selfie. **Mobile camera capture is the preferred path.** Manual upload fallback.

Your Details (fact find) - 9 sections, plain English throughout, autosave, tooltip jargon-buster, conditional logic (retired/working/carer), multiple employments, consolidated income sources.

Risk profile - in-house Graphene tool. Multi-choice, slider, numeric question types. Score breakdown view.

Two-way messaging with adviser. Email alerts (subject only, body stays in portal).

Vulnerability capture as "How Can We Support You?" with accommodation chips.

Save and resume anywhere; **no prescribed order** for client.

External signposting (Consumer Duty) - links to free guidance and complaints services where appropriate.

Onboarding complete with summary card and "What happens next" view.

> **AML provider**
> Current = SmartSearch. Graphene to propose final pick. PEPs / enhanced due diligence is out of Phase 1.

02

Client Portal · Key screens

IN PHASE 1

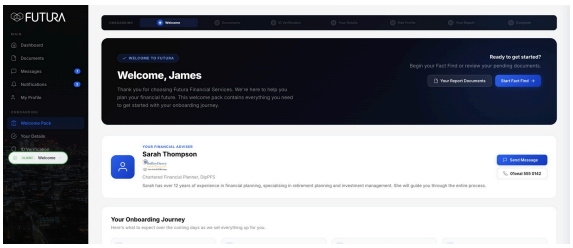

Fig 2.2 Welcome pack - adviser card with trading-style co-brand, "What you'll need" grid

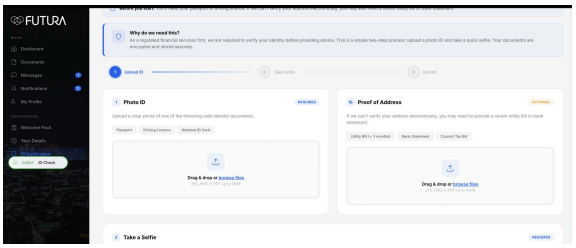

Fig 2.3 ID verification - 3-step flow with mobile camera preferred

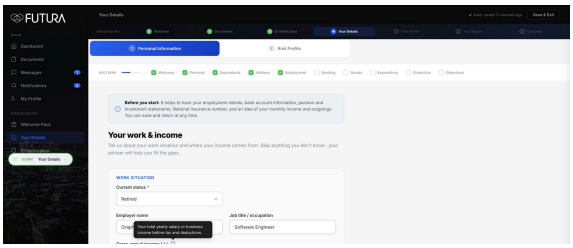

Fig 2.4 Your Details (fact find) - employment section showing retired-status conditional fields

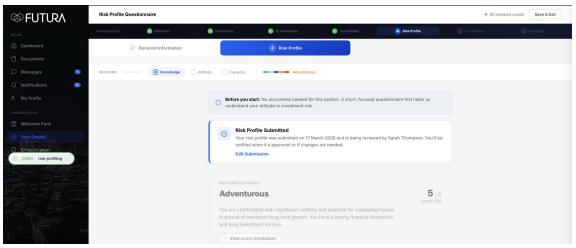

Fig 2.5 Risk profile - result card with score breakdown expanded

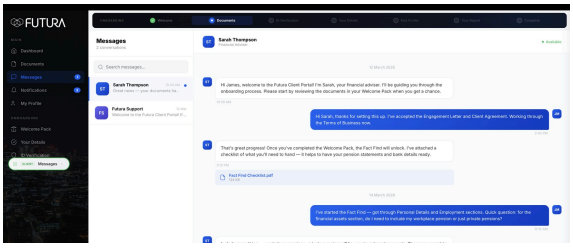

Fig 2.6 Messages - two-way thread with adviser

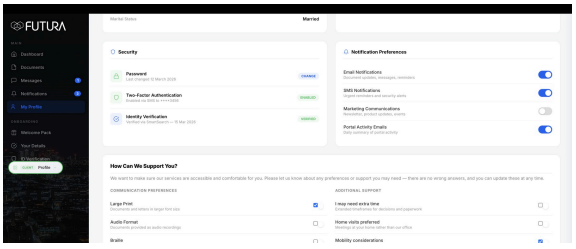

Fig 2.7 "How Can We Support You?" - vulnerability accommodations panel

Brand architecture

Futura Financial Services Group Ltd is the umbrella regulated entity. Underneath sit four trading styles: **Whitefriars, CB Financial Advisers, Futura Wealth Management, Bulley Davey**. Each shares Futura's platform, compliance, processes, regulatory permissions. Trading-style branding appears only on the "Your Adviser" card; rest of portal is Futura primary brand.

03

IN PHASE 1

Adviser Portal

Structured around the adviser's regulatory and relationship work: **review, capture rationale, override where needed, approve**. Operational actions (chase, classify, issue, account opening) surfaced for visibility but executed by admin. **The portal must adapt to the way the adviser wants the conversation** - fully online, fully offline, or mixed-mode - with no prescribed order for adviser-side work.

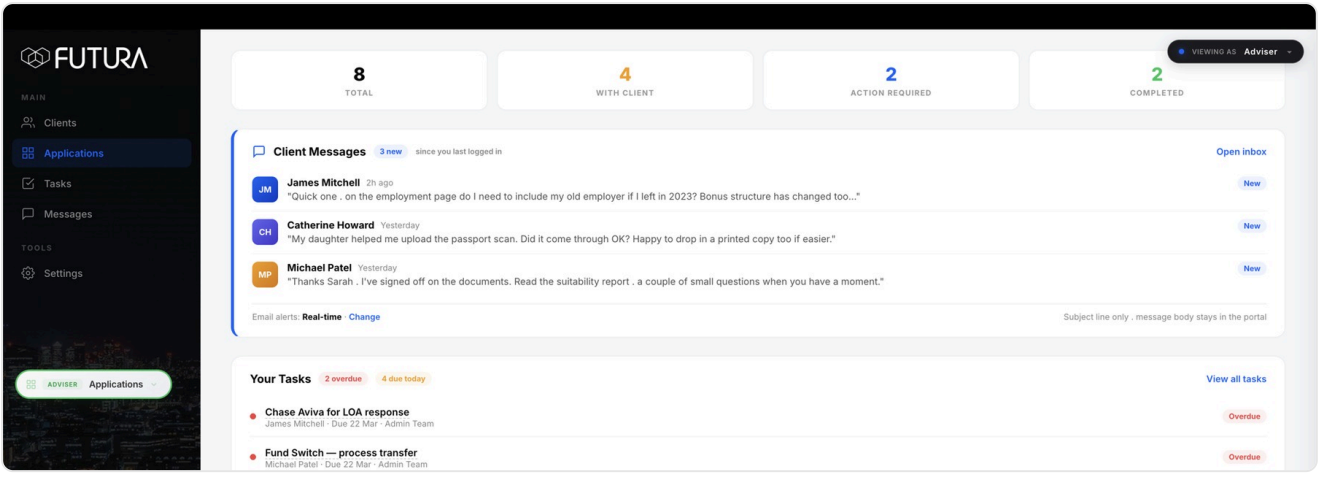

Fig 3.1 Adviser pipeline / Applications dashboard - case stats, client messages widget, tasks queue

Phase 1 features

Pipeline / Applications dashboard with case stats, filterable case table, client messages widget, your tasks card.

Login pop-up when new client messages have arrived since last login.

Case record (Client Overview) - the central per-client screen: vulnerability banner, Key Notes banner, workflow chain, LOAs, tasks, history feed.

Case Workflow chain - 7 stages: **Adviser prep, Admin sign-off, Paraplanning, Adviser review, Compliance (conditional), Client meeting, Account opening**. Task-driven movement. Revision loop from client meeting back to paraplanning.

Fact find review with Edit on Behalf, Soft Facts capture per section, Request Changes back to client, approve to admin sign-off.

Risk profile review with per-section rationale boxes (Investment Knowledge, Attitude, Capacity, Sustainable, Tolerance for Loss). FCA-required override rationale captured separately. Original client score persists after override.

ID verification review - automated AML view + manual override flow for older / less-digital clients.

Notes taxonomy: Soft Note, File Note, Key Notes banner, Soft Facts, Internal Note. Internal vs client-visible flag.

Tasks queue filterable by team (Admin / Paraplanning / Compliance). Tasks drive case movement.

Approval routing: trainee CAS → senior; high-risk products (e.g. BPR) → compliance.

> **Role profile pending (affects adviser, not admin)**
>
> Adviser currently has full access. The role profile Futura is sending will restrict the adviser further (making more things read-only for adviser), codifying "advisers see, admins do" as a real permission model. Does NOT restrict admin.

03

IN PHASE 1

Adviser Portal · Key screens

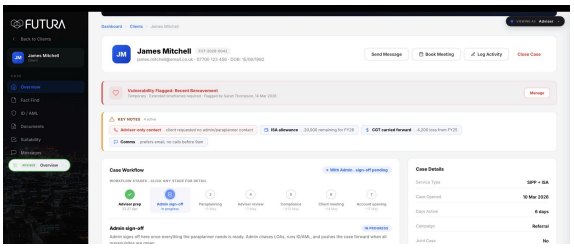

Fig 3.2 Case record - workflow chain panel expanded on current stage

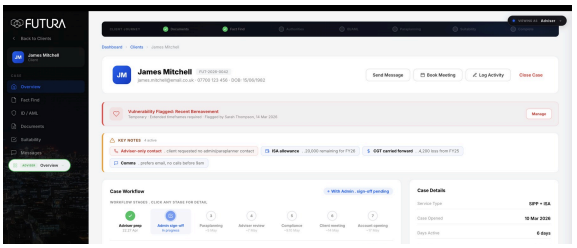

Fig 3.3 Case record - Key Notes banner with multiple type-tagged pills

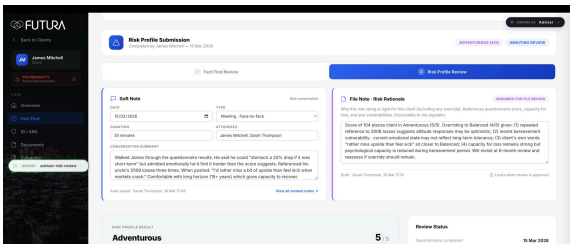

Fig 3.4 Fact find review - Edit on Behalf state with "Amended by adviser" badge

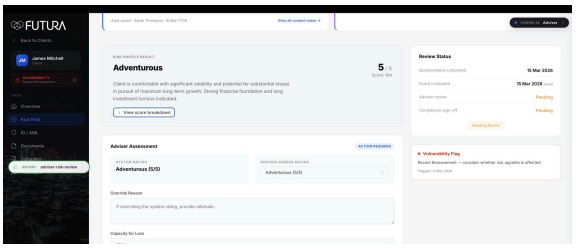

Fig 3.5 Risk profile review - all 5 rationale boxes + override rating

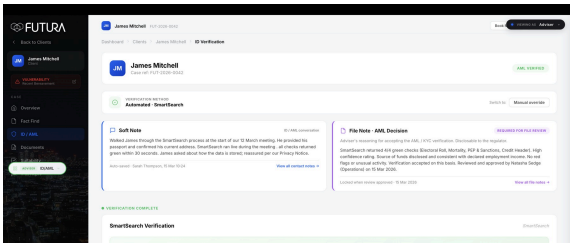

Fig 3.6 Manual ID verification - 5-step adviser-led flow

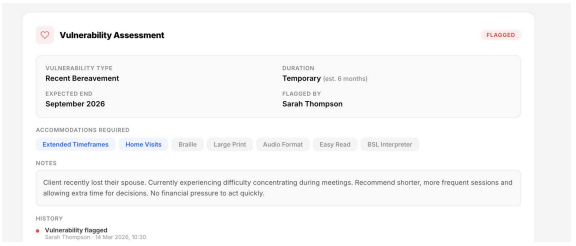

Fig 3.7 Vulnerability assessment editor on case record

Three working modes (all supported)

> **Fully online** - digital-native client completes everything via portal; adviser reviews, captures rationale, approves.

> **Fully offline** - less digital, older, vulnerable clients. Adviser captures everything on the client's behalf using Edit on Behalf and manual ID override. Margaret Walker walkthrough demonstrates this end-to-end.

> **Mixed mode** - the typical case. Client does some sections, adviser captures others. Audit trail shows provenance.

04

IN PHASE 1

Admin Portal

Where the operational work of running cases happens. **Many-cases view by default**; admin works across the book, not one client at a time. **Movement is task-driven**; admin's central work surface is the tasks queue. **Admin has full access** to every case across every trading style as one team. Configurability sits with admin (routing rules, templates, taxonomies, branding).

Other roles (light coverage)

Paraplanning - pool by default (Bridget/Natasha 26 May), with override. Picks up SR draft tasks from the pool. **Compliance** - conditional sign-off when routing rule fires. Lightly used in Phase 1. Both get fuller dedicated pages in a future phase.

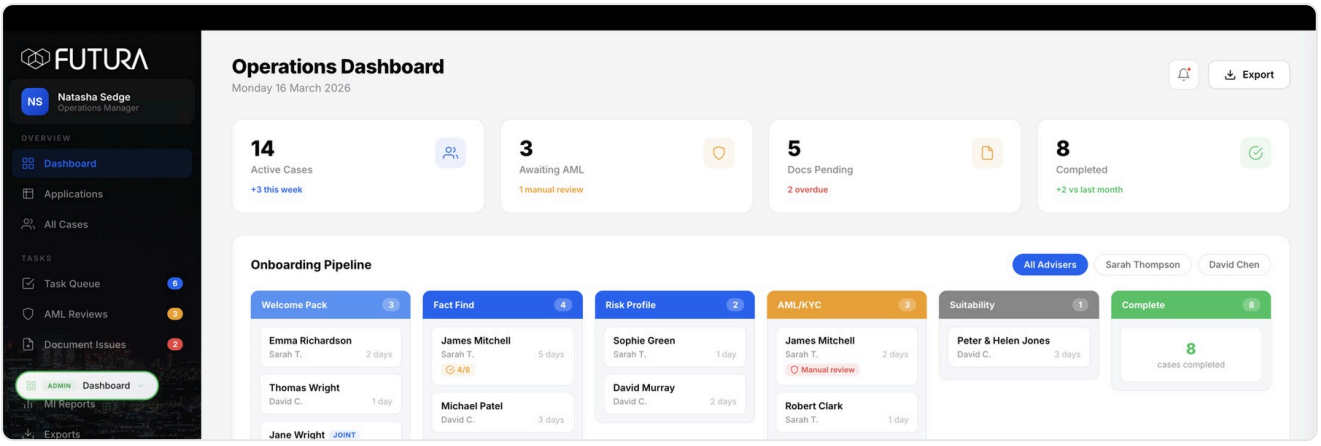

Fig 4.1 Admin dashboard / cases overview - cross-case view with filters by adviser, trading style, stage, status

Phase 1 features

Case creation - admin's first action. Client + adviser + product + joint toggle. Submit auto-sends portal invite. Trading style auto-inherited from adviser's firm record.

Admin dashboard with cross-case view, cross-cutting alerts (overdue LOAs, vulnerability cases needing review), bulk-selectable rows.

Tasks queue - the central work surface. Filter by case, stage, team, due date, status. Bulk actions: mark complete, snooze, reassign, chase.

Document management: issue from templates per trading style and product, track status per document, chase outstanding (auto + manual), classify client uploads (client does NOT classify; admin does).

LOA management: per-case + cross-case queue. Chase actions. "Not required" reason flag. Paper LOA branch acknowledged.

ID/AML management: initiate SmartSearch, review automated results, escalate to manual review (adviser handles declaration of likeness).

Vulnerability + Key Notes: both admin and adviser can flag/edit. Cross-case admin view for at-risk clients.

Configurability: adviser/firm records, document templates, provider directory, routing rules, default tasks per stage, taxonomies, AML settings, notification rules.

Audit trail visibility across all cases. SAR PDF export.

Bulk operations on tasks, documents, LOAs, reminders.

04

IN PHASE 1

Admin Portal · Key screens

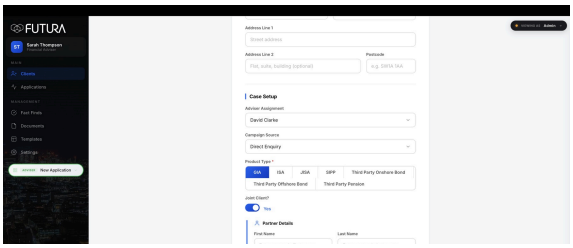

Fig 4.2 Case creation form - client details + case setup + joint client toggle

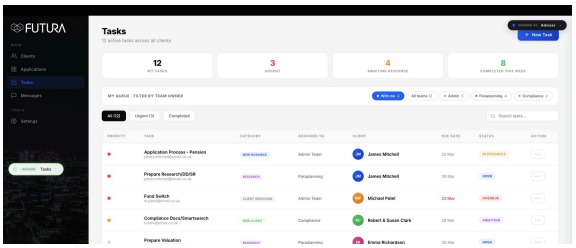

Fig 4.3 Tasks queue - filtered admin view with bulk-action toolbar

quired 6

CLIENT	TASK	ADVISER	DAYS OPEN
James Mitchell	AML Manual Review Required	Sarah Thompson	2
Catherine Howard	Document not viewed (7 days)	David Chen	7
Robert & Susan Clark	Fact find incomplete	Sarah Thompson	5
Michael Patel	Risk profile not started	David Chen	3
Emma Richardson	Welcome pack issued, awaiting login	Sarah Thompson	2
Thomas & Jane Wright	Joint case -- awaiting both logins	David Chen	1

Fig 4.4 Master view - single working surface across every active application. Sort, filter and group by adviser, trading style, stage, status, age of outstanding LOAs, vulnerability flag. Cross-cutting alerts (overdue LOAs, AML manual review queue, vulnerability cases needing review) surface at the top. Documents, LOAs, AML and settings all reachable from this one screen - admin doesn't context-switch.

Workflow stages and ownership

1. Adviser prep (Adviser) · 2. Admin sign-off (Admin) · 3. Paraplanning (Paraplanning pool) · 4. Adviser review (Adviser) · 5. Compliance (conditional) · 6. Client meeting (Adviser) · 7. Account opening (Admin / Ops)

05

Suitability Report

TEMPLATED SR IN PHASE 1

The templated SR generation engine. **Auto-populated from portal data, with editable narrative sections.** Compliance wording locked as template constants. Version-controlled. PDF output stored in client record. Source: Phase 1 Detailed Workflow Document v1.0, capability 03.

The engine ships in Phase 1; the template content is the deliverable of a dedicated Futura workshop. The two run in parallel.

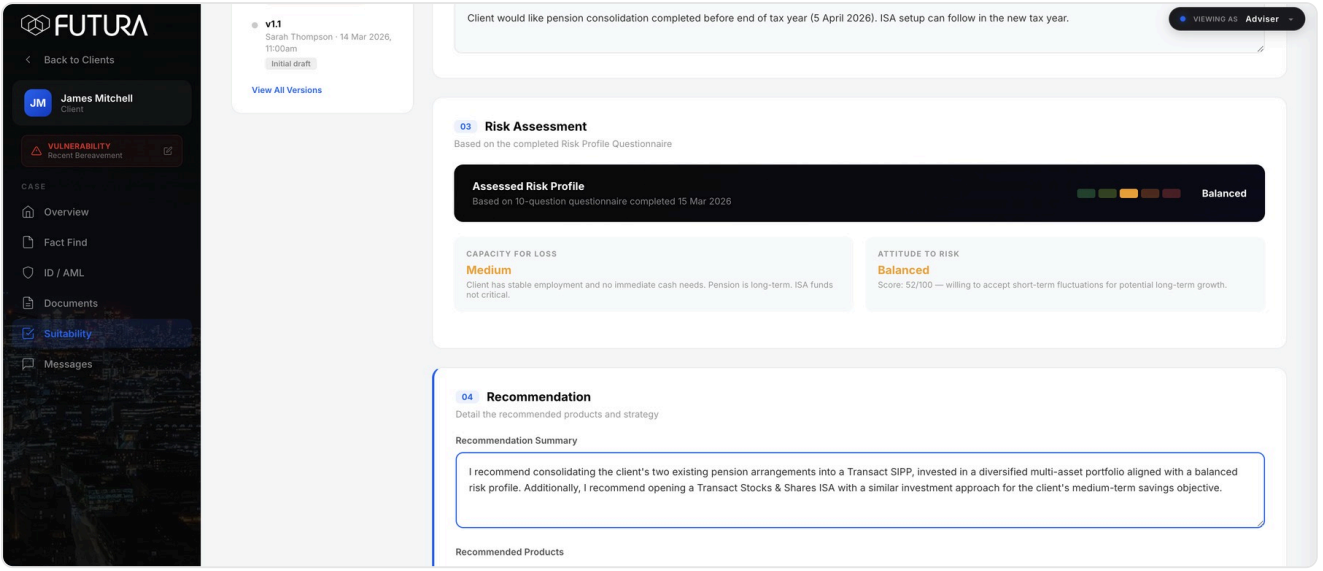

Fig 5.1 SR draft view (paraplanner) - auto-populated data with editable narrative blocks

How it works

Auto-populated from fact find (situation, objectives), risk module (band + adviser rationale), adviser captures (Soft Facts), firm-config (charges + fees), case data (client identity, joint info).

Editable narrative for paraplanner: executive summary, recommendation reasoning, alternatives considered, fee override explanation.

Compliance wording locked: FCA warnings, capital-at-risk, tax disclaimers, fee disclosure, complaint signposting. Centrally managed; not editable per case.

Lifecycle: paraplanner drafts (versioned), adviser reviews/edits/approves, compliance signs off if routed there, paraplanner issues, client views in portal, accepts or sends back.

Version control: every save creates a version. Diff view between versions. Approved version locked at issue.

Audit trail: every edit logged with who, when, before/after value. SAR-disclosable.

PDF output at issue. Server-side generation. Trading-style cover-page branding per firm record. Stored in client record. Client sees PDF in portal under My Documents.

Revision loop: if client requests changes at meeting, case routes back to paraplanning; new version drafted; re-flows through adviser review, compliance (if applicable), client meeting again.

Pre-workshop ask

Futura to share an example SR from current production (anonymised). Gives us: fixed/mandatory section headings, sections that sit above the indicative list, standard compliance wording, layout/typography expectations, sign-off block format. **Best single input Futura can provide.**

05

TEMPLATED SR IN PHASE 1

Suitability Report · Template + screens

Indicative template sections

- **Cover page** - Futura primary brand, trading-style co-brand on adviser line, client name, case ref, date
- **Executive summary** - one-paragraph headline of the recommendation
- **Your situation** - auto-populated facts
- **Your objectives** - auto + paraplanner narrative
- **Your risk profile** - band, capacity, adviser rationale
- **Our recommendation** - paraplanner authored
- **Reasoning + alternatives** - paraplanner authored
- **Charges and fees** - auto + override
- **Important information** - compliance-locked
- **Next steps and signatures** - template constants + checklist

Data sources

- **Client identity, situation, objectives** from fact find
- **Risk band + rationale** from risk module + adviser captures
- **Soft Facts context** from adviser per section
- **Recommendation + reasoning** paraplanner input
- **Charges and fees** from firm-config (with per-case override)
- **Trading-style branding** from adviser/firm record
- **Compliance wording** from template constants

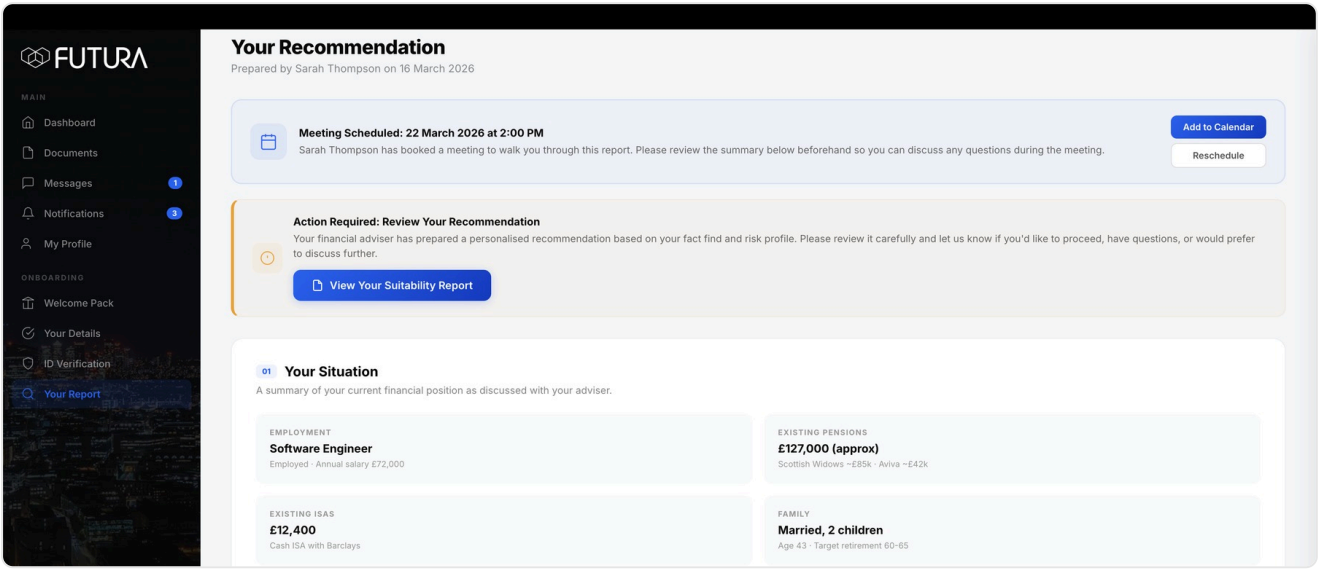

Fig 5.2 Client-facing SR view in portal - summary/headline view + access to full PDF

Out of Phase 1

Tailored / bespoke SR for complex cases (multi-product, trust structures, cross-border) - Phase 2. **PEPs / enhanced due diligence** - Phase 2 (binary screening result only in Phase 1). **Real-time collaborative editing** - Phase 2 (Phase 1 is lock-based).

06

PENDING

Futura actions

The items Futura needs to provide for Phase 1 to land. **Five priority asks below; full tracker in Confluence.**

Priority asks (pre-workshop / build-blockers)

#	ITEM	OWNER
1	**Example SR** (anonymised) from current production. Anchors the SR template structure: fixed headings, layout, compliance wording, sign-off block.	Natasha / Bridget
2	**Vulnerability classification list** - full set (Bereavement, Mental health, Physical health, Cognitive, Financial hardship, Caring responsibilities, Language barrier, etc.). Blocks vulnerability capture across client, adviser, admin portals.	Frankie / Bridget
3	**Role profile** - which adviser actions become read-only for the adviser. Codifies "advisers see, admins do" in concrete permissions terms. Default build is "adviser = full access today"; profile narrows this.	Frankie / Natasha
4	**MI / reporting database** - what data points need to be reportable. Phase 2 deliverable, but inputs needed in Phase 1 so we capture the data correctly.	Frankie / Bridget

Next steps

Jira board alignment - finalisation unlocks burn down charts and velocity tracking.

Continue screen development against agreed POC designs - full redesign from prototype.

Suitability Report engine scope clarified - templated SR is Phase 1 (per source workflow doc); tailored / bespoke SR is Phase 2. The Futura content workshop sits in parallel to engine build, not as a blocker.

AML / SmartSearch build progress - AML monitoring configured; admin dashboard for searches built; operations workbench in place to view outstanding AML, check matches and review. **Request:** SmartSearch AI credentials from Futura so we can begin end-to-end testing.
