Morgan Lloyd SIPP Services Limited. Registered No 06679257. Registered Office: The Pavilions, Eden Park, Ham Green, Bristol, BS20 0DD
Morgan Lloyd SIPP Services Limited is authorised and regulated by the Financial Conduct Authority (FRN 516447)

Key Information Summary

Term length:	18 August 2039
Tax-free lump sum:	£37,500.00
Amount remaining for drawdown investment:	£262,500.00
Pre-retirement funds:	£0.00

Withdrawals

Amount	Frequency	Existing payment /Start date	Type of payment
£1,000.00	Monthly	09 June 2026	Flexi-Access drawdown (taxable)

Total amount withdrawn annually as regular withdrawals: £12,000.00

What your fund value might be worth

Based on the withdrawals assumed above and assuming that your investments grow at -2.0% a year above inflation.
For more details, see 'What your plan might be worth if you make some withdrawals and/or take a regular income and remain invested'.

- At the end of year 5 your plan might be worth: £182,000.00
- At the end of year 10 your plan might be worth: £114,000.00
- Your drawdown fund will run out when you are: 83

Each year charges will reduce the assumed annual growth rate of your entire plan (Accumulation and Drawdown where applicable), after inflation, by: **0.2%**

So if, over the term of your plan, your fund grows annually by -2.0% above inflation, this yield (investment return) would reduce to -2.2% after charges.

You can use this 'reduction in yield' figure to compare different providers.

Comparison information

For comparison purposes the first year charge figure is: £256.47

Illustration for Mr Lee Carwithen

Date of Birth 18 August 1964
Chosen Final Annuity Age 18 August 2039

Morgan Lloyd SIPP

The Financial Conduct Authority is a financial services regulator. It requires us, Morgan Lloyd SIPP Services Limited, to give you this important information to help you decide whether our Morgan Lloyd SIPP is right for you. You should read this document carefully so that you understand what you are buying, and keep it safe for future reference.

This is an illustration of what your plan might be worth. **Please read this illustration together with the Key Investor Information Document(s) for the fund(s) you have chosen and the Key Features Document.** These also contain important information about the product benefits, charges, risks and tax, as well as your rights and commitments. IMPORTANT: The value of investments and any income from them may go down as well as up. You could get back less than you invest. The figures below are only estimates, and are based on certain assumptions which may or may not turn out to be correct.

If you are unsure about anything in this illustration please speak to your Financial Adviser.

Payments into your pension plan

Payment type	Amount	Frequency	Payment/Start date
Post-retirement transfer	£150,000.00	One-off	09 June 2026
Pre-retirement transfer	£150,000.00	One-off	09 June 2026

Where will your payments be invested?

You have chosen to invest your money as follows:

Fund(s)	**Lump sum**
Cash	£300,000.00
Total investment	**£300,000.00**

Taking your pension benefits

This illustration assumes the following:

Total value of your funds being moved into drawdown	£150,000.00
Your tax-free lump sum	£37,500.00
Total amount of your drawdown funds	£262,500.00

Your selected income requirements:

Withdrawals

Amount	**Frequency**	**Existing payment /Start date**	**Type of payment**
£1,000.00	Monthly	09 June 2026	Flexi-Access drawdown (taxable)

What your plan might be worth if you make some withdrawals and/or take a regular income and remain invested

The Financial Conduct Authority (FCA) requires all companies to illustrate how your investment might grow using growth rates of 2%, 5% and 8% for each fund unless they believe that lower rates are more appropriate for any of the funds you have selected. The difference between the lower rate and the middle rate, and the middle rate and the higher rate is fixed at 3% for each fund. These rates of return are not guaranteed and could be higher or lower.

Your plan builds up a pot of money based on the amount paid in and the returns from your chosen funds. Once you reach the minimum age allowed by law, you can make choices about taking an income from your pension fund. For example, you can exchange part or all of your pension fund for the promise of a regular income for the rest of your life from an insurer. Alternatively you can take money directly from your pension fund.

Whatever you decide to do in the future, you should have some idea of what your pension fund might be worth and an idea of what income you could get from it. You can choose to take your income from age 55 (57 from 2028).

> *What is important for your retirement planning is not the monetary value of your regular income, but what you can buy with it in the future **after** its worth has been **reduced by inflation**.*

Below we have provided an illustration showing how much your pension fund might be worth. The numbers take account of inflation in future years which has the effect of reducing your investment returns. Inflation is assumed to be 2.0% each year. The actual rate of increase could be lower or higher than this.

> *This is only to give you an idea because we can't predict future investment growth or inflation. Remember that the more risk you take with your investments the more chance you have of beating inflation, but also possibly losing money.*

Please note that the effect of inflation shown in this illustration applies equally to your other savings and investments.

The following table assumes that your investment grows at a rate of -4.9% each year after allowing for inflation

Low growth rate						
At end of year	**Amount paid in**	**Amount moved to drawdown**	**Tax-free payments**	**Taxable payments**	**Remaining fund not in drawdown**	**Drawdown fund**
	£	£	£	£	£	£
1	300,000	150,000	37,500	11,892	0	237,000
6	300,000	150,000	37,500	67,943	0	134,000
11	300,000	150,000	37,500	118,711	0	58,900
16	300,000	150,000	37,500	164,692	0	4,510
21	300,000	150,000	37,500	168,973	0	0
26	300,000	150,000	37,500	168,973	0	0
31	300,000	150,000	37,500	168,973	0	0
36	300,000	150,000	37,500	168,973	0	0
At age 99	300,000	150,000	37,500	168,973	0	0
At age 75	300,000	150,000	37,500	139,196	0	32,900

The following table assumes that your investment grows at a rate of -2.0% each year after allowing for inflation

Middle growth rate						
At end of year	**Amount paid in**	**Amount moved to drawdown**	**Tax-free payments**	**Taxable payments**	**Remaining fund not in drawdown**	**Drawdown fund**
	£	£	£	£	£	£
1	300,000	150,000	37,500	11,892	0	245,000
6	300,000	150,000	37,500	67,943	0	167,000
11	300,000	150,000	37,500	118,711	0	102,000
16	300,000	150,000	37,500	164,692	0	48,300
21	300,000	150,000	37,500	206,339	0	3,300
26	300,000	150,000	37,500	209,460	0	0
31	300,000	150,000	37,500	209,460	0	0
36	300,000	150,000	37,500	209,460	0	0
At age 99	300,000	150,000	37,500	209,460	0	0
At age 75	300,000	150,000	37,500	139,196	0	77,600

The following table assumes that your investment grows at a rate of 1.0% each year after allowing for inflation

High growth rate						
At end of year	**Amount paid in**	**Amount moved to drawdown**	**Tax-free payments**	**Taxable payments**	**Remaining fund not in drawdown**	**Drawdown fund**
	£	£	£	£	£	£
1	300,000	150,000	37,500	11,892	0	252,000
6	300,000	150,000	37,500	67,943	0	206,000
11	300,000	150,000	37,500	118,711	0	163,000
16	300,000	150,000	37,500	164,692	0	123,000
21	300,000	150,000	37,500	206,339	0	86,300
26	300,000	150,000	37,500	244,060	0	51,100
31	300,000	150,000	37,500	278,225	0	17,800
36	300,000	150,000	37,500	295,937	0	0
At age 99	300,000	150,000	37,500	295,937	0	0
At age 75	300,000	150,000	37,500	139,196	0	146,000

Buying an income for life

This option shows what you may get by making use of your open market option and using it to buy an income for life (also known as an annuity). An annuity provides you with an income that will last as long as you live. The amount of income you can get from an annuity may be higher when you buy it if you have a health condition or a lifestyle that could impact your life expectancy, e.g. smoking. This is known as an enhanced annuity.

The table below shows examples of possible fund values and income payments after 10 years:

Growth Rate	**Low**	**Middle**	**High**
	-4.9%	**-2.0%**	**1.0%**
Your fund after 10 years:	£72,200	£114,000	£172,000
You could choose to buy a yearly annuity initially worth:	£4,150	£7,280	£11,900

The table below shows examples of possible fund values and income payments at age 75:

Growth Rate	**Low**	**Middle**	**High**
	-4.9%	**-2.0%**	**1.0%**
Your fund at age 75:	£32,900	£77,600	£146,000
You could choose to buy a yearly annuity initially worth:	£2,200	£5,660	£11,500

It is important to understand that all the above figures are to give you an idea of what you could receive. We can't predict how your fund will grow and what it will cost to buy an annuity when you retire.

Please note that the figures do not take account of the income tax payable on the annuity income payments or on any tax charge that may apply where the lump sum allowance is exceeded.

Important notes about the projections

- The growth rates are not guaranteed. They are not minimum or maximum amounts. What you get back will depend on what you make on your actual investments. That could be more or less than the figures shown in the projections, and could be less than the amount(s) paid in.
- Charges have been assumed to remain the same as they are today, but may vary in the future.
- The cost of the income we've used is based on a price set by our regulator for use in illustrations.
- You will have many choices available when you take your pension benefits and you can shop around for the best deal.
- You could purchase an income now of £11,846.20.
- The income is based on you buying:
    - a monthly income payable in advance throughout your retirement, increasing in line with the Retail Price Index each year.

Critical Yield

Critical yield is the estimated rate of growth required each year to maintain your drawdown income and have enough left in your fund to buy the annuities detailed below.

The yields are calculated based on the projections earlier in this illustration. Please refer to the previous section. We have assumed that the annuity you can purchase now will increase and have the same death benefits as in that section.

- Critical Yield A – This is the rate of return required to match the annuity that could be purchased now, which is calculated at £11,846.20. The calculation assumes that you take that amount as drawdown income and then buy a guaranteed annuity of that amount.

- Critical Yield B – This illustrates the rate of return required under the plan to maintain your selected level of income throughout your retirement.

When calculating the critical yield figures, an interest rate that defines the amount of annuity that you can buy today is used. This is based on the rate of interest on 15-year government securities (gilts), and is currently 5.50%.

	Critical Yield A	**Critical yield B**
After 10 years	4.26% per year	2.19% per year
Assuming you buy an annuity at age 75 years	4.79% per year	2.27% per year

The charges for your plan

The charges for operating your plan are described below. They consist of:

- The charges for managing your plan and the money in your funds
  The way these charges are paid is explained in your Key Features document

The charges

For managing your plan

We will deduct a charge from your investment for the cost of managing your plan (the service charge). The amount will depend on the total amount in your plan each month when the charge is taken.

Name	Amount	
Annual Administration Fee	£93.00	VAT is payable in addition.
Annual Income Drawdown	£125.00	The charge shown is the annual charge. VAT is payable in addition.

For managing your funds

The charge depends upon the funds you choose and they may vary in the future. Based on your current choice, the charges levied by the fund managers are:

Fund(s)	Initial fund charge %	Ongoing charges figure (OCF) %
Cash	0.00%	0.00%

Interest Retained

For some transactions, funds are received into a pooled bank account which is not assigned specifically to your SIPP, for example transfers in from other pension arrangements, and tax relief paid by HMRC. These amounts are passed on to your individual SIPP account, or invested, within our normal timescales. While in the pooled account, interest may be earned on the aggregate balance. Any interest earned on this account is retained by Morgan Lloyd. The rate is variable and only applies to certain transactions, so it is not possible to account for these in the projected values above, or the table below showing the effect of charges on your fund.

How charges reduce the value of your pension plan fund

The following table shows you the potential effect of charges on your plan using the -2.0% middle growth rate shown above.

All providers have to give you this information to help you compare their charges.

			What you might get back if your investment grows by -2.0% each year		
At end of year	**Payments to date**	**Withdrawals**	**Before charges are taken**	**After plan and investment charges are taken**	**After all charges are taken**
	£	**£**	**£**	**£**	**£**
1	300,000	49,392	245,000	245,000	245,000
2	300,000	61,050	229,000	228,000	228,000
3	300,000	72,480	213,000	212,000	212,000
4	300,000	83,686	198,000	197,000	197,000
5	300,000	94,672	183,000	182,000	182,000
6	300,000	105,443	169,000	167,000	167,000
7	300,000	116,003	155,000	153,000	153,000
8	300,000	126,355	142,000	140,000	140,000
9	300,000	136,505	129,000	127,000	127,000
10	300,000	146,455	116,000	114,000	114,000
At age 75	**300,000**	**176,696**	**80,500**	**77,600**	**77,600**

In percentage terms the reduction from £80,500 to:

- £77,600 means that our plan and investment charges will reduce the yearly growth rate to -2.1%, a reduction in growth of 0.2%.
